

CEM Contents

Part I – Introduction

- I-1 Introduction
- I-2 History of Coastal Engineering
- I-3 The Coastal Engineering Manual
- I-4 Coastal Diversity

Part II – Coastal Hydrodynamics

- II-1 Water Wave Mechanics
- II-2 Meteorology and Wave Climate
- II-3 Estimation of Nearshore Waves
- II-4 Surf Zone Hydrodynamics
- II-5 Water Levels and Long Waves
- II-6 Hydrodynamics of Tidal Inlets
- II-7 Harbor Hydrodynamics
- II-8 Hydrodynamic Analysis and Design Conditions

Part III – Coastal Sediment Processes

- III-1 Coastal Sediment Properties
- III-2 Longshore Sediment Transport
- III-3 Cross-shore Sediment Transport Processes
- III-4 Wind-blown Sediment Transport
- III-5 Erosion, Transport, and Deposition of Cohesive Sediments
- III-6 Sediment Transport Outside the Surf Zone

Part IV – Coastal Geology

- IV-1 Coastal Terminology and Geologic Environment
- IV-2 Coastal Classification and Morphology
- IV-3 Coastal Morphodynamics

Part V – Coastal Project Planning and Design

- V-1 Planning and Design Process
- V-2 Site Characterization
- V-3 Shore Protection Projects
- V-4 Beach-Fill Design
- V-5 Navigation Projects
- V-6 Sediment Management at Inlets
- V-7 Coastal Engineering for Environmental Enhancement

Part VI – Design of Coastal Project Elements

- VI-1 Introduction to Design of Coastal Project Elements
- VI-2 Types and Functions of Coastal Structures
- VI-3 Site-Specific Design Conditions
- VI-4 Materials and Construction Aspects
- VI-5 Fundamentals of Design
- VI-6 Reliability Based Design of Coastal Structures
- VI-7 Example Problems
- VI-8 Monitoring, Maintenance and Repair of Coastal Projects

Glossary
